

- 1.Created a class DataTables.
- 2.Set up the property and launched the chrome driver using provided url.
- 3.Selected 50 pages from the dropdown using Select class.
- 4.Got the list of rows in the first page using table concept and got the rows count.
- 5.Using a for loop traverse from i=1 to rowscount.
- 6.Retrieve the name and age from each row and clicked on first coloumn.
- 7.Retrieve the salary of each employee.
- 8.Using if condition printed the name of employee whose age>=50 and salary>=200000.
- 9.Again clicked on the name.
- 10.Clicked on page 2 and repeated the same process again and printed the name.

**#Actual Output is same as expected.**
